Date: Thursday 25 April

Release: Immediate

## **Strategic Marine delivers Jati Five, confirms order for two more crew transfer vessels**

### **New order underscores long term regional relationship**

Strategic Marine, a leading specialist shipbuilder in Asia-Pacific, today delivered the Jati Five crew transfer vessel to Malaysian owner, Dinasti Jati Sdn Bhd.

The company also confirmed it has received an order for two further ships in the range, the Jati Six and Jati Eight.

The Jati Five, ordered last year and completed to one of Strategic Marine's established in-house designs, was delivered at the company's regional shipyard headquarters in Singapore. It is the third vessel Strategic has delivered to Dinasti Jati since 2009.

Ron Anderson, Strategic Marine's Executive Director, said: "We are extremely pleased to deliver the Jati Five on time and to the precise requirements of our valued client, Dinasti Jati.

"We're also delighted our long term associates at Dinasti have seen fit to order a further two ships in the Jati line," he added.

The Jati Five's aluminium superstructure was assembled at Strategic's yard in Vietnam then shipped to Singapore for fittings and technical completion.

The 40-metre, 50dwt vessel is classed by ABS, can carry up to 58 passengers, and operates with a crew of 10. It features three Kummins KTA engines and can achieve speeds up to 25 knots. It bears +A1 HSC / +AMS notation.

Underscoring Strategic's ongoing commitment to Dinasti Jati and Malaysia's entire owner/operator sector, Strategic is due to deliver the Jati Six in the third quarter of this year, with the larger (70 pax) Jati Eight to follow next year.

**About Strategic Marine:**

Strategic Marine, with operations in Singapore, Western Australia and Vietnam, is one of the world's leading specialist shipbuilding and engineering companies.

Strategic operates principally in the offshore sectors, producing high quality crew boats, support vessels, passenger ferries, and high-speed patrol boats at shipyards in Singapore and Vietnam.

Since incorporating in 2001, Strategic has processed over 600 vessels for a variety of clients in the maritime, offshore and naval defence sectors.

Strategic's solid reputation for the manufacture of high-performance ships, historically focused on aluminium vessels, has also become associated with steel-based construction over the years.

In addition to its growing newbuild capabilities, which now include diversification into state-of-the-art offshore windfarm service vessels, Strategic provides maritime solutions in refit/repair, support fabrication and shipping infrastructure. Strategic's operation in Perth, Western Australia, focuses on a comprehensive suite of maritime fabrication and logistics services.

Beginning this year, Strategic will commence building crew and windfarm sector vessels for stock request, shortening delivery periods to meet increased market demand.
